Waica

forward to meet him and he introduced himself as James Barker of the Evangelist Mission of San Fernando de Atabapo. He told me that he and a companion now up at the village had been living with the Waikas for the past seven months. He added that the Indians had sunk the boat in which they had come so that they were now quite isolated. He spoke their language fluently and his attitude to them was that of an indulgent schoolmaster.

I told him of our desire to see the village and he spoke about it to the Waikas. They were at once suspicious and reluctant; even when they eventually agreed, agreement was far from unanimous. Nevertheless, we fell in behind Barker and marched up a slippery path so muddy that I began to envy the forest people their nakedness. We came to a recently made clearing which had been cleared by fire and I tried to slip away up a little-used path. At once the Indians objected, their vehemence suggesting that the plantation to which the path probably led hid many wonderful secrets.

After twenty minutes of marching we came to a fence in a clearing. The fence was made of stakes lashed together forming a perfect circle. I thought this must be the village but we passed it by. A hundred yards beyond we came to another similar enclosure and this time our guides led us inside. As we entered I remembered what Pierre Ivanoff had told me of an earlier occasion when he and three companions had succeeded in reaching a Waika village. The first enclosure we had just seen was undoubtedly the counterpart of the one in which he had been forced to dance with his hosts before being allowed to go on to the second. In the present instance the dance was omitted from our programme.

Inside the enclosure, which was some thirty yards across, huts were built with their backs to the palisade, leaving a circular space in the middle shaded by a big tree. The corner of each hut consisted of three stakes in the form of a tripod supporting horizontal rafters of green wood tied in place by lianas. Wide-eaved roofs were thatched with banana leaves. The circle of fencing was unbroken except for the single entry. A pungent, musty smell pervaded the place as we

Fig. 2-6. Rewkumi climbing a rasha tree to collect the palm fruit. The tree has many sharp spines on it, and the Yąnomamö use an ingenious device made of crossed poles to climb the tree. The climber stands on one pair of poles and lifts the other pair up the tree. Then he climbs to the upper pair and lifts the bottom pair up. In this way the tree is slowly ascended, and no thorns get stuck in the body.

The grubs

are wrapped in small packages of leaves and placed in the hot coals to roast. They render down in the heat, yielding some liquid fat, which is licked off the leaves, and a soft, white body. I could never bring myself around to eat one, but an experienced missionary told me they tasted very much like bacon. But then I suppose that anything cooked in a smoky fire tastes like bacon.

The discarded seeds of palm fruits also get infected with much smaller grubs. The Yąnomamö break the hard seeds open with a rock, extract the grub, and prepare it in the above manner.

Some species of caterpillar are also eaten. They are not cleaned before cooking; the squirming insects are simply wrapped in leaves and thrown into the coals to roast.

Another important cultivated plant is tobacco. Since men, women, and children all chew tobacco, the patch of ground devoted to its cultivation is quite large. Each family grows its own supply and jealously guards it. It is one of the most commonly stolen crops and, therefore, frequently has a conspicuous stick fence around it to draw the thief's attention to the fact that its owner shows a strong concern for its welfare. A man will even put a fence between his own tobacco and that of his father, should the two crops be planted side by side, and neither man can take a plant belonging to the other without permission. I also saw a young man place a number of sharpened bones in the ground near his tobacco patch so that a thief might suffer a serious foot wound should he trespass.

Cotton is the last plant to which major significance can be attached. The fibers are separated by hand from the seeds and spun into thread with a stick whorl, then several threads are twisted into a thick yarn. The yarn is rolled into balls about the size of a grapefruit and stored until enough has been accumulated to make a hammock. Frequently the balls of yarn are traded to the members of other villages.

The hammocks are manufactured on a crude frame consisting of two upright poles located about 6 feet from each other. The yarn is wrapped around and around the two poles until the desired width of the hammock is reached, usually about a yard, perhaps a little more. About a dozen vertical seams are braided into the horizontal strands of yarn; the poles are removed after the ends of the hammock have been tied with a few strands of cotton string, and the new hammock is completed (see Fig. 2-7). The women also use the yarn to make a short waistband, armband, and halter, and the men use it to make fat, round belts. All ages and sexes use it as a wrist, ankle, knee, and chest cord, and the men make a waist cord of the string, to which they tie their penis foreskins.

Numerous other plants are cultivated in the gardens, but are not as significant in everyday life as those discussed. They include leaf fibers, *bixa* pigment, avocados, drugs, water gourds and gourds for making spoons and ladles, a kind of squash whose seeds are eaten and whose yellow flowers are used by the young girls as decorations, sugar cane, cashew trees, papaya fruit, hot peppers, and a host of magical plants.

Most of the magical plants are associated with benevolent or at least nonmischievous functions. "Female charms" (*sua hãri*), for example, are used by men to make women more receptive to sexual advances. The dried leaves of the magical plant are mixed with a fragrant wood, and the resulting powder is said to be able to make a reluctant female hunger for sex. Most men carry a small packet of this at all times. The powder is held in the palm of the hand, which is then held firmly against the nose of the female: She is forced to breathe it into her lungs. After she has done this, she becomes very receptive, and can thereafter be easily seduced by the man who charmed her. Another magical plant is cultivated by the women. Its leaves are thrown on the men when they have club fights because it allegedly keeps their tempers under control and prevents the fight from escalating to shooting. Still other plants are cultivated to insure that male or female children grow up to be healthy adults, a different plant being associated with each sex.

Some of the plants are cultivated for malevolent purposes, such as causing the women in enemy villages to have miscarriages or pains in the back when they are preg-

At the evening meal he refused to take a portion of the meat so that the others could have more. Later in the evening, he appeared at my hut begging for a can of sardines to satisfy his hunger for meat. He preferred to go hungry rather than risk the onus of being accused of poor marksmanship or stinginess.

Both sexes participate in the cooking, although the women do the greater share of it. Food preparation is not elaborate and rarely requires much labor, time, or paraphernalia. Spices are never used, although the salty ashes of a particular kind of tree are sometimes mixed with water to form a condiment of sorts. The food is dunked into the salty liquid and eaten.

Everyone eats in his hammock using his fingers for utensils. Some meals cannot be eaten from a reclining position, so the members of the family squat in a circle around the common dish. For example, large quantities of tiny fish are cooked by wrapping them in leaves and cooking them in the hot coals. When the fish are done, the package is spread open, and everyone shares its contents.

Animals are never skinned before cooking. They are merely put over the fire after their entrails have been removed, and roasted, head, fur, claws, and all. Most of the fur is singed off in the process of cooking. The animal is dismembered by hand. The head, particularly the head of a monkey, is highly prized because the brain is considered a delicacy. The most common meat is monkey, of which there are several varieties, so that this delicacy is enjoyed rather frequently by the Yąnomamö.

By the time supper is over it is nearly dark. The fires are prepared for the evening; if someone has allowed his own fire to go out during the day, he simply borrows two glowing sticks from a neighbor and rekindles his own hearth. The entrances to the village are sealed off with dry brush so that prowlers can not enter without raising an alarm. Before retiring to their hammocks, the Yąnomamö first sit on them and wipe the bottoms of their bare feet together. This rubs off most of the debris that has accumulated on them during the course of the day. Everyone sleeps naked and as close to the fire as possible. Despite the inevitable last-minute visiting, things are usually quiet in the village by the time it is dark.

Things are not always quiet after dark. If anyone in the village is sick, a shaman will chant to the malevolent spirits most of the night to exorcise them. Or, should anyone be mourning a dead kinsman, he or she will sob and wail long after the others have fallen asleep. Occasionally, a fight will break out between a husband and wife, and soon everybody in the village will be screaming, expressing opinions on the dispute. The shouting may continue sporadically for hours, dying down only to break out anew as someone gets a fresh insight into the problem. Once in a while someone gives a long, loud speech voicing his opinion on the world in general. Those who are interested may add their own comments, but the audience usually grumbles about the noise and falls asleep.

Status Differences and Activities

Daily activities, except those concerning gardening and visiting, do not vary much from season to season. Much of the variation that does occur is a function of one's age or sex, as was shown above.
